

Aluminum-magnesium-zinc photovoltaic bracket processing process

Overview

The zinc-aluminum-magnesium bracket is directly made of steel strips coated with zinc-aluminum-magnesium coatings, cold-bending, deviation correction, fixed length and punching connection holes to form steel sections, and finally made into zinc-aluminum-magnesium brackets. Legal status (The legal status is an assumption and is not a legal conclusion. Google has not performed a legal analysis and makes no representation as to the accuracy of the status listed. It is an alloy metal with excellent comprehensive performance.

Lightweight and high strength: Aluminum alloy brackets are light, only 1/3 of steel, and easy. Aluminum-magnesium-zinc plating is to add aluminum, magnesium and a trace amount of silicon to the zinc plating layer. According to whether they can follow the sun to rotate, they can be divided into fixed brackets and tracking brackets. Fixed bracket The fixed bracket has a simple structure, good stability, and.

Aluminum-magnesium-zinc photovoltaic bracket processing process

Advantages and disadvantages of aluminum-magnesium-zinc

...

Photovoltaic bracket zinc-magnesium-aluminum material has the following significant advantages: Excellent corrosion resistance: The alloy elements such as zinc, aluminum, and magnesium in
