

Are solar photovoltaic panel pallets fragile

Overview

Wood pallets decompose in the elements, resulting in breakage and installation delays. Stacking packaged solar modules adds extra. For a product made primarily of fragile glass, solar panels can absorb many stressors and still successfully function well beyond their 30-year warranted lifespans. In fact, some manufacturers claim that you can even step on certain thin-film panels, though we wouldn't recommend doing it anyways. Visual inspection of a module might sometimes help to find microcracks. Whether you're a homeowner, a contractor, or someone looking to power up a solar farm, ordering solar panels in bulk comes with its own set of challenges.
