

Automatic turning photovoltaic panel lift

Overview

This innovative tool enables you to lift solar modules to the roof with ease and precision, making installation faster, safer, and more efficient. With its compact design and simple operation, Module Lift is ideal for both residential and commercial solar installations. The TranzVolt is a battery powered, solar panel hoist, which allows for the vertical lift of modules to the rooftop. This is an excellent option for projects located in remote, off grid, or new construction areas where power is not readily accessible. A pulley system is attached to the top of the ladder. Backed by an extended two-year warranty, this system uses Amsteel-Blue high-performance twelve-strand single braid cable made from one hundred percent.
