

# Base station power supply configuration estimation

## Overview

---

In this article, a mathematical model of the power supply system for a mobile communication base station is developed. An improved base station power system model is proposed in this paper, which takes into consideration the behavior of converters. Assuming that the power consumption of 5g BBU is 350W and that of AAU is 1100W, relevant power matching calculation is carried out. A power efficient design is required that supplies both the higher voltage analog circuits and multiple. ended Practice for DC power system design?

IEEE Recommended Practice for DC power system design batteries, chargers, distribution. Tech ttery chargers, and distribution equipment.

## Base station power supply configuration estimation
