

# Budget scheme for after-sales service of low-pressure integrated energy storage cabinet

Energy storage(KWH)

**102.4kWh**

Nominal voltage(Vdc)

**512V**

---

Outdoor All-in-one ESS cabinet

## Overview

---

Turnkey EPC energy storage installed cost ranges for select sizing configurations in 2021 are summarized in the chart below. The various configurations represent example applications (or use cases) and provide a sense of how costs scale with capacity and duration. The suite of Lithium ion battery energy storage system costs are rapidly decreasing as technology costs decline, the industry gains experience, and projects grow in scale. Cost estimates therefore need to be updated regularly for incorporation into utility planning studies and for comparisons to conventional. This report demonstrates what we can do with our industry partners to advance innovative long duration energy storage technologies that will shape our future—from batteries to hydrogen, supercapacitors, hydropower, and thermal energy. What is BESS and Why It Matters?

BESS stands for Battery Energy Storage Systems, which store energy generated from renewable sources like solar. DFMA® analysis is used to predict costs based on both mature and nascent components and manufacturing processes depending on what manufacturing processes and materials are hypothesized.
