

# Can I add glass in front of solar panels

## Overview

---

Better glass covers make the solar panel convert sunlight to power well. It lets more sunlight reach the solar cells and. For a glass installer focusing on installing glass in solar panels, the job goes far beyond mounting fragile components on a framework. For varying conditions and needs each kind has unique benefits and features. For example, we regard tempered glass. The top layer is tempered glass (about 3-4mm thick), followed by ethylene-vinyl acetate (EVA) encapsulant, solar cells, more EVA, and a backsheet. Messing with this recipe?

Risky business. The light transmission can be much lower for high-efficiency Low-E windows, especially in the infrared.

### Will A Solar Panel Work Behind Glass?

In summary, it is possible to collect solar energy through glass, but the amount of energy will be significantly less. If you plan to install a panel behind a window or other glass barrier, ...
