

Can photovoltaic panels be added at will

Our Lifepo4 batteries can be connected in parallels and in series for larger capacity and voltage.

Overview

Yes, adding solar panels to an existing system is usually possible—but it's not always straightforward. Depending on how your original system was designed, expansion might require equipment upgrades or additional installation costs. If there's enough available installation space, the cost of adding extra panels may be beneficial to maximize. Sometimes, you'll outgrow the original solar system installed on your roof, and you might need to add some more panels to meet your additional electricity needs. The economics will probably look a lot different than the first time you went solar. But you'll also want to talk to your solar installer about expanding your system.
