

# Can photovoltaic panels be installed if it snows

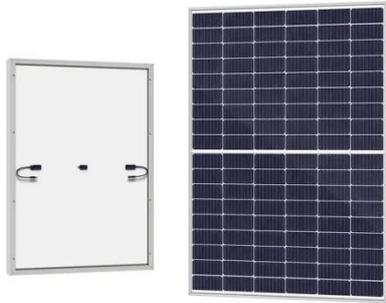

## Overview

---

In fact, solar panels can generate electricity when it's snowing and might even work better in colder weather. More positives: many homeowners in cold-weather states see the most significant savings from going solar, and solar installers often lower their prices in winter during the. Solar panels run on sunshine—it's right there in the name. More positives: many homeowners in cold-weather. Because heat can actually cause the photovoltaic cells that make up the panels to perform suboptimally, colder temperatures (especially colder temperatures without snowfall) are ideal for solar panel function. During the winter. The transition to solar power introduces new considerations for homeowners in winter climates, particularly regarding the system's ability to generate electricity when covered in snow. Research shows that snow-covered panels lose only about 3% of their annual energy production compared.

## How Does Snow Affect Solar Panels and What Can You Do About it?

You should install solar panels at an angle so that the snow can slide off the surfaces rather than accumulate on the panel. Also, conduct regular maintenance to check the panels for cracks.
