

# Can the energy storage container be used directly

## Overview

---

The energy storage container is a module that hosts the entire battery energy storage system within a shell of container size. It serves as a rechargeable battery system capable of storing large amounts of energy generated from renewable sources like wind or solar power, as well as. How do utility-scale battery energy storage systems (BESS) work?

Battery energy storage systems can gather and store energy from either the grid directly or from an adjoining solar farm or other power source.
