

Capacity of senegal solar energy storage power station

Overview

In May 2025, pan-African energy developer AXIAN Energy launched construction of the NEA Kolda power plant, a 60-megawatt solar facility paired with 72 megawatt-hours of battery storage. The project is backed by financing exceeding €105 million. Senegal has the third-largest installed solar capacity in West Africa at 671 MW, according to data from the African Solar Industry Association (AFSIA) and GOGLA. The country has reached an 84% electrification rate, with 294 MW of residential PV installed, while several large-scale solar-plus-storage projects are under development, despite the start of production at the Sangomar gas field. The project includes a 16-megawatt-peak solar plant and a battery system capable of delivering 10 megawatts of power for two hours, or 20 megawatt-hours in total. This setup allows the plant not only to. Senegal's solar boom is real, but it runs on private momentum as public ambition outpaces the state's financial capacity.
