

Cerium-zinc flow battery

Overview

The zinc–cerium redox flow battery was first proposed by Clarke and co-workers in 2004, which has been the core technology of Plurion Inc. (UK). In 2008, Plurion Inc. suffered a liquidity crisis and was under liquidation in 2010 and the company was formally dissolved in 2012. However, the information of the experimental conditions and charge-discharge performance described in the e. Overview Zinc–cerium batteries are a type of first developed by Plurion Inc. (UK) during the 2000s. In this Due. At the negative electrode (anode), zinc is electroplated and stripped on the carbon polymer electrodes during charge and discharge, respectively. $\text{Zn (aq)} + 2\text{e} \rightleftharpoons \text{Zn(s)}$ (-0.76 V vs. SHE) At the posit. • University of Southampton Research Project: Zinc-cerium redox flow cells batteries • U.S. Department of Energy's Flow Cells for Energy Storage Workshop

Cerium-zinc flow battery

The Renaissance of the Zn-Ce Flow Battery: Dual-Membrane

...

While the zinc-cerium flow battery has the merits of low cost, fast reaction kinetics, and high cell voltage, its potential has been restricted due to unacceptable charge loss and unstable

...
