

# **Charge multiple solar container lithium battery packs simultaneously**

## Overview

---

Yes, you can charge two different battery banks using one solar panel system. This method allows for effective and independent charging, optimizing your renewable energy. Charging two batteries in parallel can be a practical solution for ensuring a steady and reliable power supply for various applications, from marine and RV setups to off-grid solar systems. This is true for any battery chemistry. To meet the charging requirements of these large systems, several TriStar™ or TriStar MPPT™ controllers can be connected in parallel to a battery bank. Its advanced diagnostics, temperature compensation, and spark-proof design make it ideal for RVs, boats, and automotive setups. However, it's important to understand the process and follow best practices safely and efficiently.
