

Chilean energy storage container

Overview

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers. In March, a 100 MW battery energy storage system was inaugurated in the Elena commune, in the northern region of Antofagasta. Chilean president Gabriel Boric (centre) at the inauguration of an energy storage plant in the northern region of Antofagasta in April 2024. Chile has been one of the countries at the forefront of the renewable energy. In July 2024, AES announced plans to construct a 763 MW solar plant with a 1,063 MW battery offering five-hour storage, as reported in pv magazine LatAm. Since Chilean co-located storage assets don't require an Environmental Impact. Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the reliability of the country's electric grid as it pursues new renewable energy generation. Chile has the potential to run.
