

China s annual production of solar photovoltaic panels

Overview

China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. 28, showing the country added 315.07 GW (AC) of new solar capacity last year, alongside 119. Both figures marked new annual records. Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. [1]. The Chinese solar industry is at a pivotal point. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge. The data reached an all-time high of 2.
