DSP-based microgrid control

A Detailed dSPACE-Based Implementation of Modulated Model

This article presents a dSPACE-control-platform-based implementation of a fixed-switching-frequency modulated model predictive control (M²PC) strategy, as an inner controller of a ...

Microgrid Controls , Grid Modernization , NLR

Microgrids can include distributed energy resources such as generators, storage devices, and controllable loads. Microgrids generally must also include a control strategy to maintain, on an ...

Innovative neural network and fuzzy logic control techniques for single

This paper conducts a detailed analysis of both simulated and practical implementations of a system that integrates a photovoltaic (PV) panel, a DC-to-DC boost converter, and a DC-to-AC ...

DSP Based Control of Grid Interactive Inverter for Small Scale DG

Every grid interactive inverter control scheme consists of a current control/power control and synchronization technique. There are a lot of linear as well as non-linear current control strategies ...

(PDF) Model, Design and Implementation of a Low Cost HIL for Power

In this study, the authors propose a method to implement a low-cost hardware-in-the-loop (HIL) system for power converters and microgrids design, test and analysis. This approach uses a ...

Load frequency control in renewable based micro grid with Deep ...

Numerous methods, algorithms, and controllers have been created to address these issues and preserve system stability and efficient load frequency control (LFC).

Dual-core DSP for control and

communication in AC microgrids

These systems integrate distributed energy sources (including photovoltaic, wind power, mini hydro, gas turbine, etc.) and energy storage devices (such as batteries, ultra-capacitors, ...
