

Distributed energy storage equipment projects include

Overview

They include a diverse set of technologies, such as distributed rooftop solar systems, community solar systems, distributed wind systems, electric vehicle (EV) charging equipment, and battery energy storage. The roadmap was produced by the U. Department of Energy (DOE) Interconnection Innovation e-Xchange (i2X)—led by the DOE Solar Energy Technologies Office (SETO) and Wind Energy Technologies Office (WETO)—and published in January 2025. It provides the diverse group of interconnection stakeholders. IEEE Std. 1547-2018 defines a DER as “a source of electric power that is not directly connected to a bulk power system (BPS).”¹ The NERC System Planning Impacts of DER Working. The Distributed Energy Production and Storage Technical Assistance Hub is a resource to support Community Lenders, project developers, businesses and communities develop and finance projects that deploy renewable power generation and storage technologies plus enabling infrastructure. Our goal is to. DERs are small modular energy generators that can provide an alternative to traditional large-scale generation. DER. Distributed generation (DG) in the residential and commercial buildings sectors and in the industrial sector refers to onsite, behind-the-meter energy generation. DG often includes electricity from renewable energy systems such as solar photovoltaics (PV) and small wind turbines, as well as battery.
