

District low carbon solar power station

Overview

There are a number of technologies available to generate or harvest energy and manage the building interface in a low-carbon and resilient district energy systems. Solar photovoltaic (PV) devices convert sunlight into electrical energy. A single PV cell produces about 1 or 2 watts of power. In cities, people have the same energy needs at the same time, so it. Combined heat and power (CHP), sometimes referred to as cogeneration, is an efficient and clean approach to generating onsite electric power and useful thermal energy (e.
