

# Do photovoltaic panels have water tanks

## Overview

---

These systems use solar collectors, usually mounted on rooftops, that absorb sunlight and transfer that heat to a water storage tank. The heated water can then be used for showers, washing dishes, or even heating a home. Solar water heaters—sometimes called solar domestic hot water systems—can be a cost-effective way to generate hot water for your home. Not only do these systems significantly reduce utility costs—by as much as 80%—but they also foster energy. Solar water heaters come in a wide variety of designs, all including a collector and storage tank, and all using the sun's thermal energy to heat water. The only difference in systems is how these three elements are configured.

## Do photovoltaic panels have water tanks

---

### How do solar hot water panels work?

One (purple) pumps water through a solar panel as we saw above and down into a tank inside your home. This is connected to a second circuit (red) with a conventional hot water tank that ...
