

Domestic photovoltaic thermal PVT panels

Overview

A photovoltaic thermal (PVT) system combines photovoltaic panels with a thermal collector to produce both electricity and heat from the same surface. This dual-output system improves total energy efficiency and supports applications like hot water, space heating, and industrial. Hybrid Photovoltaic-Thermal (PVT) panels represent a significant advancement in renewable energy technology for domestic heating applications. It produces 6-8 times more energy than a standard PV panel, maximizing energy output while minimizing your carbon footprint. Photovoltaic and thermal hybrid solution not. One such advancement is the Solar Photovoltaic Thermal Hybrid System (PVT)—an integrated solution that combines the benefits of both solar photovoltaic (PV) and solar thermal systems. Instead of sacrificing electricity generation for hot water (or vice versa), PVT systems deliver both simultaneously, achieving total energy efficiencies of up to 76%.

Domestic photovoltaic thermal PVT panels

Dualsun SPRING: the leading hybrid solar (PVT) panel

The Dualsun SPRING hybrid solar PVT panel generates both electricity (PV) on the front side and heat (Thermal) on the back side. It produces 6-8 times more energy than a standard PV panel, ...

Photovoltaic thermal hybrid solar collector

PVT collectors combine the generation of

ESS

solar electricity and heat in a single component, and thus achieve a higher overall efficiency and better utilization of the solar spectrum than conventional PV modules. Photovoltaic cells typically reach an electrical efficiency between 15% and 20%, while the largest share of the solar spectrum (65% - 70%) is converted into heat, increasin...
