

# Dual-input and dual-output uninterruptible power supply

## Overview

---

Split operation means that two UPS units operate independently, each supplying power to separate loads or feeding a dual-input device via an automatic transfer switch (ATS) or static transfer switch (STS). There is no electrical connection between the two UPS outputs under normal. The TX-D Series Uninterruptible Power Supplies are suitable for equipment requiring 230V nominal voltage but requiring to be powered from any international single phase power source from 100 - 240V nominal. When power returns, the FirstLine®P UPS will automatically recharge the batteries for the next. A UPS supplies power even in the event of mains failure and protects your system against supply interruptions. We offer UPS solutions for DC and AC applications where the functionality and design are optimally tailored to the requirements of various different industries. Supply your system reliably. Tripp Lite Double-Conversion Smart Online UPS, 120V 1500VA 1440W, 5 NEMA 5-15R Outlets, Network Card Slot, LCD Status Screen, Expandable Battery, USB, DB9, 1U Rack Mount, 2-Year Warranty (SU1500LCD1U) DOUBLE-CONVERSION: Maintains perfect output with fully regulated sine wave AC with +/-3% voltage. In modern industrial automation and process control systems, ensuring uninterrupted power supply is critical, especially for sensitive instrumentation such as Distributed Control Systems (DCS), Safety Instrumented Systems (SIS), and Programmable Logic Controllers (PLC). Dual output power supply is used widely in medical equipment, industrial cabinet, electronic appliances, measurement instruments, avionics, etc.

## Dual-input and dual-output uninterruptible power supply

---

### Dual UPS Power Supply in Instrumentation Systems: Split Operation ...

To enhance power reliability, dual UPS (Uninterruptible Power Supply) configurations are commonly deployed. However, one key engineering decision is whether to operate these UPS systems in split ...
