

# Dublin Wind Power System Battery

## Overview

---

On Wednesday the 7th of February 2024, the ESB officially opened a major battery plant at its Poolbeg site in Dublin which will add 75MW of fast-acting energy storage, providing increased grid stability and the ability to provide more renewables on Ireland's electricity system. Nearly 400 wind farms in Ireland today collectively generate more than 35% of the island's electricity. These carbon-free electrons travel on power transmission lines to farms, businesses and homes, helping utilities avoid emissions of carbon dioxide and other greenhouse gases from burning fossil. Microsoft data centers will soon begin sharing energy from their UPS battery storage systems with Ireland's power grid, part of a growing movement for data centers to collaborate more closely with the utility industry. A long row of racks and servers inside a Microsoft Azure cloud data center. The uninterruptible power supplies will help the grid with fast frequency response, and could be used to power some of the data. The Kylemore Battery Energy Storage System in Dublin went into operation in 2023 and has the capability of providing 30MW of fast-acting storage. 5 megawatt (MW) facility in Stephenstown in County Dublin. The facility is capable of providing a rapid delivery of electricity into the power grid in order to balance fluctuations resulting from the growing proportion of.
