

El salvador energy storage policy

Overview

The Law for the Promotion of the Use of Renewable Energy, approved by the Legislative Assembly in October 2025, establishes benefits aimed at generating renewable energy for self-consumption, as well as energy storage systems, their installation, operation, and maintenance. This handbook details the life-cycle process for a successful utility BESS project, describing all phases including use case development, siting and permitting, technical specification, procurement transitions to renewable energy. If you prefer to log into your personal account, please sign in below. Through various policies drafted and passed over the past three decades, El Salvador has set itself on a path towards clean energy – a necessity for a country that is severely at-risk of climate change and its effects. In the following paper, I attempt to provide pertinent, contextual background. While the concept of energy storage charging stations remains relatively new, recent government initiatives and private sector investments suggest this technology could reshape the country's energy matrix.
