

Electricity market trends netherlands

Overview

This report discusses the power market structure of Netherlands and provides historical and forecast numbers for capacity, generation, and consumption up to 2035. 4 petajoule of Electricity was consumed in the Netherlands in January 2025, marking a 5.5% increase compared to the previous month. Recent data, updated on January 6th, 2026, can be found. The Dutch electricity markets are in a state of flux. This is the fifth edition of the TenneT Annual Market Update, which provides. According to national statistics, renewables (wind, solar, biomass) produced about 50-53% of electricity in 2024, led by wind power ($\approx 27\%$ of total generation, thanks to new offshore farms) and solar PV ($\approx 18\%$), with modest biomass ($\approx 5\%$). Fossil fuels (mostly natural gas) accounted for the remaining. The Netherlands has established an ambitious energy and climate policy framework, targeting significant reductions in greenhouse gas emissions and a substantial increase in renewable energy use by 2030. This is the case in the gas and electricity markets. Demand for energy usually drives up the.
