

Excavator with solar panels

Overview

Picture this: A 45-ton excavator delicately lifting a crate of photovoltaic panels like a ballet dancer handling crystalware. This unexpected marriage of brute force and precision is rewriting the rules of solar farm construction. Solar Flex panels fit seamlessly on cab roofs. These thin panels are low-profile and built to withstand impact up to 51mph. Controllers regulate the flow of current from the solar panels to the batteries, simultaneously. Emerging technologies now allow heavy machinery to be powered by battery-electric systems, which can be charged using solar energy collected either onsite or through green energy grids. As a family-owned and run business, Triple T Excavating knows the value of taking care of your own — which is one of the many reasons they work with. Large-scale solar energy systems require a team with specialized skillsets—from the developer to the solar engineer and installer to the excavator and everyone in between.

Excavator with solar panels

7 Things a Solar Farm Needs in an Excavator , Horst Excavating

Every meter of trench dug is a step closer to bringing this solar power plant online. The Hyundai excavators are a game-changer, offering the kind of versatility and reliability we need.
