

Fire protection device for industrial and commercial energy storage cabinet

Overview

Industrial energy storage cabinets use fire resistant materials, automatic suppression systems with non-conductive clean agents like FM-200 or Novec 1230, and passive fire barriers to contain thermal events. These measures comply with standards like UL 9540A. Liquid cooled outdoor 215KWH 100KW lithium battery energy storage system cabinet is an energy storage device based on lithium-ion batteries, which uses lithium-ion batteries as energy storage components inside. When. Multi-dimensional use, stronger compatibility, meeting multi-dimensional production and life applications High integration, modular design, and single/multi-cabinet expansion Zero capacity loss, 10 times faster multi-cabinet response, and innovative group control technology Meet various industrial. These systems combine high energy materials with highly flammable electrolytes. The device can be installed in a normal temperature and pressure environment. It starts immediately after receiving the ignition signal.

Fire protection device for industrial and commercial energy storage

Fire protection device for industrial and commercial energy ...

Within the IP54 protected cabinet consists of built-in energy storage batteries, PCS inverter, BMS, air-conditioning units, and double layer fire protection system.
