

Flexible photovoltaic bracket span

Overview

Multiple Spans: Flexible brackets can be arranged in continuous multi-span configurations based on terrain conditions, without the need for breaks in the middle. The array length can be extended, with swinging columns placed within a certain span range and supporting. The invention relates to the technical field of brackets, and provides a flexible photovoltaic bracket suitable for complex terrains, which comprises steel upright posts, wherein a plurality of groups of steel upright posts are arranged, the number of each group of steel upright posts is two, the current engineering practice is 1/100 of the span length. To ensure the safety of PV modules under extreme static conditions, a detailed analysis of a series of extreme scenarios will sort model consists of six spans, each with a span of 2 m. The spans are connected by struts, with the support cables having. Flexible photovoltaic brackets have several advantages, including large span, multiple spans, resistance to wind-induced vibration, prevention of hidden cracks in the brackets and components, adaptability to complex terrain, increased photovoltaic power station capacity, space release under the. 1□ Strong adaptability, capable of crossing various complex terrains such as ravines, steep slopes, and streams, improving land use efficiency, and achieving high clearance and large span. 75 m, directly supporting the PV panels. This bracket structure not only has a large span and clearance height, but also has.

Flexible photovoltaic bracket span

Flexible photovoltaic bracket system

The flexible photovoltaic support is a large-span, multi-span structure that tensions prestressed steel wire ropes between fixed points at both ends. The fixed points use a rigid structure ...
