

Global distribution of solar panels

Overview

IEA reported that in 2023, 407–446 GWdc of PV was installed globally, bringing cumulative PV installs to 1. The rest of the world was up 30% y/y. Global solar installations reached nearly 600 GW – an impressive 33% increase over the previous year – setting yet another record. Solar accounted for 81% of all new renewable energy capacity added worldwide. While remaining a modest contributor to overall electricity generation for now, solar's. Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. Start exploring solar potential by clicking on the map. Between 2025 and 2029, global solar photovoltaic capacity additions are projected to increase yearly and range from some 655 gigawatts in 2025 to 930. The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated distributed (<1 MW) solar PV data. Countries located near the equator, such as those in the Middle East, North Africa, and parts of South America, have abundant solar irradiance, making.
