

High Field Solar Photovoltaic Panels

Overview

Highfield Solar has been active since 2014 and works exclusively within Ireland. We are focused on the development of ground-mounted solar PV energy parks with 282MWp now operational, 199MWp nearing completion and 700MW in late-stage development. Our in-house team works at all levels of project. Highfield Energy develops, constructs, owns and operates electricity generation projects with a particular focus on renewables. Improvements in cell performance, the use of novel materials like perovskites, and flexible, adaptable designs are fundamentally transforming how solar energy is. At the key node of intergenerational transition of global Photovoltaic (PV) technology, the back contact (BC) cell technology is leading the new-generation PV technology paradigm revolution, becoming the core engine to drive industry cost reduction and efficiency improvement and realize energy. Following the successful completion of a 282MWp portfolio now operational in Ireland, Highfield Solar has secured project financing to fund the construction and operation of an additional Solar PV project with 93MWp of installed capacity. Berlin/Germany, Dublin/Ireland, Bristol/UK, 22/02/2024. The joint venture - established in 2014 between renewable energy developers ib vogt, Highfield Energy and Aura Power - received funding for the Gaskinstown.

High Field Solar Photovoltaic Panels

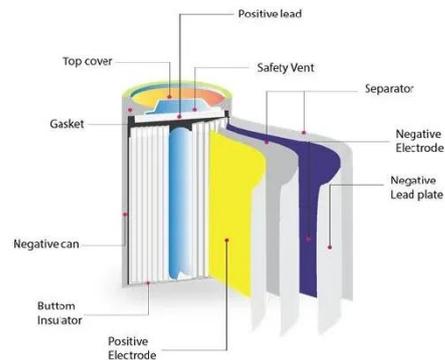

The World's Leading Supplier of Solar PV Solutions

Vertically Integrated Solar PV Value Chain LONGi's technological and manufacturing leadership in solar wafers, cells and modules underscores our commitment to helping accelerate the clean energy ...
