

# How long is the life of solar photovoltaic panels

## Overview

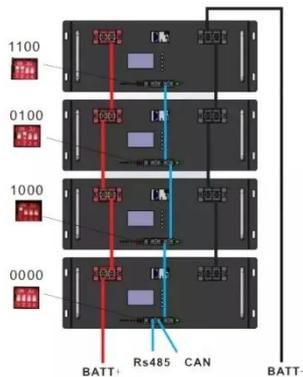

---

Solar panel lifespan typically spans 25-30 years of productive operation, with many quality systems continuing to generate electricity for 40+ years at reduced but still valuable capacity levels, making them exceptionally durable, clean energy investments. Solar panels don't suddenly shut down. They lose power gradually, year after year, until they're no longer pulling their weight. That's the real story behind solar panel lifespan. Not just how long they last, but how well they perform along the way. If you're counting on solar to deliver long-term. Your solar panels should last at least 25 years—but some will last up to 40. 5% more electricity over 25 years compared to standard panels, often justifying the higher initial investment through extended productive life and better. Solar panels are built to last, but just how long can you expect them to keep powering your home?

The average lifespan of a solar panel is 25-30 years, meaning your investment in clean energy will pay dividends for decades.
