

# How many batteries does the base station have

## Overview

---

The Base battery system has three main components: the battery pack, inverter, and hub. EverExceed's advanced LiFePO<sub>4</sub> battery solutions are designed to fully meet these demanding technical requirements, ensuring reliable power supply for 5G networks under diverse operating conditions. The required battery capacity for a 5G base station is not fixed; it depends mainly on station power. You can only have one Base Station per location, but you can have multiple locations (up to 10) on one Ring account. It's what allows you to use your cell phone to call your home phone. It is composed of several antennas mounted on a tower and a building. The base station is the most visible element of a mobile or cellular telecommunications network. 1 Long Standby with Infrequent Discharge Base station batteries typically remain on continuous float charge for months or years, only.
