

How to cut off the power supply of photovoltaic panels

Overview

To safely disconnect solar panels, homeowners should turn off AC and DC switches, cover the panels to prevent electricity generation, check the voltage to ensure safety, unplug connectors and wires, and secure loose wires. Before starting the disconnection process, shut off the DC and AC circuit breakers so there's no electrical load connected to the solar panels. Now that safety precautions are in place, here's a comprehensive guide to disconnecting solar panels. You should contact a professional if you're uncomfortable performing these steps or your system's manual advises against it.
