

# How to keep the North Energy Storage Container warm

## Overview

---

This will help keep the inside of your container warm and dry and will also protect any items that you have stored inside from the cold. If there are specific items that need extra protection, then try using bubble wrap, styrofoam, blankets, and cardboard. Here's the twist: the real challenge isn't generating heat—it's keeping it from escaping. When it comes to living in a container home in a cold climate, the key to comfort lies in the details of construction and preparation. We'll explore options like spray foam insulation, rigid foam boards, fiberglass batts, reflective barriers, and more. By the end, you'll know several strategies to. Does anyone have any ideas on either eliminating moisture build up from the propane heaters or any ideas for electric heaters?

Also would the electric heaters still cause moisture?

condensation will come any time youre heating an uninsulated building, best bet if possible in my opinion is fire to. It's about more than just keeping your treasures warm or cool it also helps prevent condensation, which could lead to serious damage like rust and mold. The metal from the storage containers is a.
