

# Huawei Emergency Communications Mobile Base Station

## Overview

---

China Mobile's Liaoning branch and Huawei have built the world's first special base station in Dandong City. This new base station uses 700MHz frequency and advanced technology to work better during disasters. Based on leading wireless, transmission, and datacom technologies, Huawei base station backhaul microwave solution provides fiber-level broadband wireless backhaul capabilities, ultra-low latency, fully modular architecture design, and co-site integration with wireless networks. Designed with robust processing capabilities and flexible networking options, the BBU5900 series provides seamless integration with Huawei Remote. A base station, also known as an eNodeB (for 4G LTE) or gNodeB (for 5G NR) in Huawei's terminology, is a piece of equipment that facilitates wireless communication between user equipment (UE) like smartphones, tablets, and IoT devices, and the core network of the telecommunications provider. Whether for commercial or government use, a stable and reliable communication network is required in this information age.

## Huawei Emergency Communications Mobile Base Station

### Huawei's 700MHz 5G Emergency Tower Offers 47 percent Faster Speed

China Mobile's Liaoning branch and Huawei have built the world's first special base station in Dandong City. This new base station uses 700MHz frequency and advanced technology to ...
