

Install the photovoltaic bracket load-bearing

Overview

Before installing the solar mounting system, you need to measure the roof surface, check the load-bearing capacity, and plan the layout of the system. Make sure to allow for proper clearance of the panels, and mount them in such a way that they can receive the most sunlight. Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Choose an appropriate racking and mounting system for the type of PV module, and install the system along. To ensure the smooth installation of photovoltaic system brackets and meet design requirements, Guidance Method For The Installation Of PV System Brackets are provided, including ground-mounted, rooftop, adjustable tilt angle, floating, Building-Integrated Photovoltaics (BIPV), bifacial, and. This is important for security reasons and to make sure the mounting mechanism can resist earthquakes.
