

# Installation of large generator air intake and exhaust

## Overview

---

This article will cover the key points of installing the intake and exhaust systems of a diesel generator set, focusing on the intake system, exhaust system, and relevant design and installation requirements. A well-designed system guarantees that the diesel engine receives enough fresh air during operation while effectively expelling exhaust gases. Engine room layouts may not offer ideal pathways for. When a generator is installed and operated in an indoor environment, adequate ventilation for heat dissipation and combustion is required. Cooling and combustion air directly impact engine and package unit performance and the canopy design has to allow the correct amount of air in and out. While a generator's rated power output will be reduced as the ambient air temperature increases above 21°C (70°F), the with radiators through which the engine block coolant water is fed. Worse, non-compliance with EPA or NFPA codes.

**Outdoor Cabinet BESS**  
50 kWh/500 kWh Battery Storage System  
Industrial and Commercial Energy Storage

- All in One**  
Integrating battery packs
- High-capacity**  
50-500kWh
- Degree of Protection**  
IP54
- Operating Temperature Range**  
-20~60°C (Derating above 50 °C)
- Intelligent Integration**  
integrated photovoltaic storage cabinet
- Rated AC Power**  
50-100kW
- Altitude**  
3000m(>3000m derating)

## Avoid These Mistakes in Generator Exhaust System Installations

This article highlights some of the most common field challenges encountered when installing industrial generator exhaust systems, and the steps a design team can take to prevent ...
