

# Is it good to use solar power on the balcony

## Overview

---

Although balcony solar panels won't generate enough electricity to power your entire household, they can be a good idea if you're looking to generate renewable energy while living in an apartment or a home without roof access. How effective they are will depend on how much sunlight. Thanks to new safety standards (UL 3700) and a wave of state-level legislation sweeping the country, more and more apartment dwellers and renters are finally gaining access to the benefits of solar power. A 400W system produces approximately 300-600 kWh annually depending on location and conditions. The answer is yes, thanks to portable, plug-in solar systems designed for use in smaller spaces like balconies and patios. They're already catching on in Europe, with Germany seeing the number of registered plug-in systems almost doubling since mid-2023; there are now a total of 400,000 balcony. This is the world of balcony solar, and it represents a massive shift in who gets to participate in the renewable energy transition. It's a statement that you don't need a sprawling roof to take control of a piece of your power.
