

# Is the quality of Yijing photovoltaic panels good

## Overview

---

Chinese panels are good in terms of efficiency, affordability, and performance. Irrespective of some user complaints, the panels are worth it. Currently, China holds a leading position in the global solar supply chain by investing more than US\$130 billion. According to the latest report by Wood Mackenzie, China manufactures and supplies more than 80% of the world's solar photovoltaic panels (PV) components such as polysilicon, wafers. Many of the most successful solar panel manufacturers in the world come from China, including LONGi, Jinko, Trina, and Canadian Solar (despite the name). These brands produce a sizable portion of the solar panels used in the United States, and are used in everything from huge utility-scale solar. In order to promote green energy and sustainable development, the Chinese government has strongly supported the capital investment and technological research and development of solar panels, which has effectively improved the quality of China's solar panel products, which have strong. This is a common question as the latest estimates indicate that China is manufacturing roughly 70% of the world's solar panels today - a dominant market share and a clear indicator of China's key role in the global solar industry.

## Is the quality of Yijing photovoltaic panels good

---

### Are Chinese solar panels good quality?

Solar panels of all ranges in quality are made in China so there is no current correlation between the level of panel quality and whether it's produced in China or elsewhere.
