Overview

Yes, solar inverters can be installed outdoors. When installing, avoid exposing them to excessive sunlight or high temperatures. In determining whether a solar inverter will be able to handle rain, snow, or moisture, the IP (Ingress Protection) rating is your safest bet. For example, an IP65-rated inverter means it's fully dust-proof and protected from low-pressure water jets from all sides. After all, outdoor conditions can get unpredictable and harsh. However, for added peace of mind, install inverters under. The answer is that it depends on the type, brand, and specifications of the inverter used.
