

# Is there solar power generation in the cave

## Overview

---

The cave is almost completely powered by solar power. They have a fallback diesel generator with extremely low fuel burn, when there is no sun and the 30kWh lithium battery is empty. Two 28 kW solar panels reduce the carbon footprint by more than 50 %. Especially as some caves are far from the grid, and it's much cheaper to install solar power than to build a power line over kilometers through wilderness. However, this. On a plain in western Utah, two massive caverns—each roughly big enough to house the Empire State Building—are being hollowed out of rock salt a mile underground. A company called Hydrostor pumps water in and out of caverns to store energy generated by renewables. The concept integrates. The bedroom near the back of the cave is cool, dark, and cozy.

## Is there solar power generation in the cave

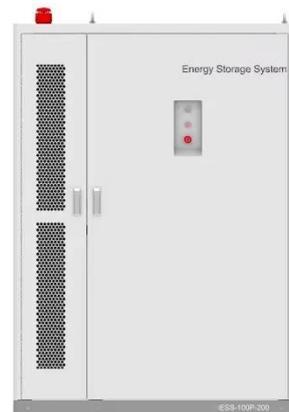

### The Push to Store Renewable Energy in Massive Salt Caverns

On a plain in western Utah, two massive caverns--each roughly big enough to house the Empire State Building--are being hollowed out of rock salt a mile underground. It's a three-step ...
