

Kuwait energy efficiency

Overview

The Ministry of Finance has rolled out a comprehensive initiative aimed at optimizing electricity and water usage across its facilities. This move is part of the government's broader strategy to enhance energy efficiency, reduce public expenditure, and promote sustainability. Total final consumption (TFC) is the energy consumed by end users such as individuals and businesses to heat and cool buildings, to run lights, devices, and appliances. The Country Savings assessments provide a summary of the benefits attained from improved energy efficiency and climate friendly lighting, cooling appliances, and equipment.
