

# Leaf Solar Photovoltaic Power Generation

## Overview

---

Researchers from Imperial College London have invented a new leaf-like design that collects and generates photovoltaic solar energy and produces freshwater by mimicking the processes found in real plants. This is according to a press release by the institution published on Tuesday. The system, inspired by a leaf, is based on a biomimetic transpiration (BT) layer that cools down the embedded PV unit and utilizes excess heat from the cell to. In a breakthrough development, scientists at Imperial College London have created a revolutionary solar technology called PV-leaf that has the potential to harness more power than standard solar panels.

## Leaf Solar Photovoltaic Power Generation

---

### **Multi-generation photovoltaic leaf to produce electricity, thermal**

Researchers at the Imperial College London have developed a new photovoltaic leaf (PV-leaf) concept that is able to produce electricity, thermal energy, and water.
