

# Legal direct supply of photovoltaic panels

## Overview

---

This guide explains how UL and ASTM standards, as well as FCC Part 15 and other requirements, apply to solar panels sold in the United States. Where previously solar energy accounted for only a tiny share of energy generation, it now generates a significant portion of the energy in many markets and in recent years has been the largest share of new electric capacity additions in the United States. This completely updated desk reference. A Solar Power Purchase Agreement (SPPA) is a financial arrangement in which a third-party developer owns, operates, and maintains the photovoltaic (PV) system, and a host customer agrees to site the system on its property and purchases the system's electric output from the solar services provider. Solar photovoltaic (PV) manufacturing involves making a wide variety of products and materials across several manufacturing steps, often done in different locations. In the United States, there are two leading types of solar panels: cadmium telluride (CdTe) and crystalline silicon (c-Si). During this period, major developments have occurred in the solar PV industry and in related policy areas including (1) a. Solar panels sold in the United States need to comply with various standards and regulations, including requirements that cover labeling, documentation, and testing. 1 Under an EPC Contract, a Contractor is obliged to deliver a complete facility to the Project Company. The Project Company needs only to turn a key to start.
