

# Liquid flow energy storage project in france

## Overview

---

The selected projects are expected to commence operations before 2030 and, over their first ten years, are projected to reduce emissions by approximately 476 million tonnes of CO<sub>2</sub> equivalent. The project involving flow batteries will be located in France, and more. Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. 8 billion in grants from the Innovation Fund, supporting the implementation of cutting-edge clean technologies across Europe. Among these is a project featuring a hybrid energy storage system that combines. The French market for liquid cooled battery energy storage systems (BESS) has experienced robust expansion driven by the nation's aggressive renewable energy targets and decarbonization commitments.
