

Mauritius electric grid

Overview

The access to electricity rate in Mauritius is relatively high at 98. As of 30 June 2024, the electricity grid infrastructure comprised an extensive network of transmission and distribution systems designed to ensure reliable and efficient power delivery to consumers across the country. Below is a detailed breakdown of the grid lengths by voltage levels: Accommodate. Mauritius is grappling with a critical issue: its strained electrical grid. Faced with record-high consumption and outdated infrastructure, the island is compelled to overhaul its energy strategy to pave the way for a sustainable future. The incident exposes a dangerously thin reserve margin in Mauritius's power system and highlights. At a press conference on 8th May 2025, the Minister of Energy and Public Utilities delivered a candid assessment of our electricity sector: ageing infrastructure (both public and private), imminent capacity shortfall, and a system that has been dangerously stretched over the last few months. In its 2021-2022 budget speech, the government announced plans to increase the use of renewable sources of energy for electricity generation.
