

# Mexico household energy storage power supply production

## Overview

---

With frequent power outages and rising electricity costs (up 18% since 2020), Mexican households are increasingly adopting energy storage systems. Think of it like having a giant power bank for your home - but smarter and more sustainable. In Mexico, this concept has taken on greater relevance. The Mexican government has implemented supportive policies, such as net metering and energy storage auctions, to stimulate market growth. Mexico's ambitious clean energy goals and rapidly expanding renewable energy capacity (primarily solar and wind) necessitate energy storage to address. Mexico's electricity production landscape is dominated by natural gas, which accounted for 58 percent of the country's power output in 2023. This reliance on gas, predominately imported from the United States, reflects a broader trend of increasing energy demands in the Latin American nation, with. While the country boasts immense potential in solar and wind resources, the path to a sustainable and secure energy future is still hampered by a crucial missing element: energy storage. As the national grid becomes increasingly strained by rising demand, aging infrastructure, and the growing share. The Mexico residential energy storage market is positioned at a pivotal juncture, driven by increasing energy demands, grid modernization initiatives, and a growing emphasis on renewable integration. In 2022, the installed capacity increased to 87,130 MW, which represented an increase of 1.
