

Microgrid Financial System

Overview

This article explores various financing mechanisms—including grants, carefully structured tariffs, and flexible Pay-As-You-Go (PAYG) models—that empower the successful deployment and sustained operation of remote microgrids, fostering energy independence and local development. In particular, they are based on experiences working with States affected by Hurricane Sandy including New Jersey and New York where high winds, coastal flooding, and other hazards of the “superstorm” caused damage which cost the federal government \$50 billion to restore (Hurricane Sandy Rebuilding). They are instruments built for a different era of energy production, one defined by scale and uniformity rather than agility and localized benefit. Today's microgrid financing landscape is dominated by a few key models, each with its own logic and limitations. These are the foundational structures. Viking Equipment Finance provides equipment financing for small to mid-sized companies seeking \$50,000 to \$50 million to purchase or refinance essential use equipment and machinery. Federal Funding for Microgrids and DERs is Disappearing. High-level Financial Metrics - Important financial metrics used to evaluate project. Many remote. Microgrids represent a significant shift in how we generate, distribute, and consume electricity, offering a path towards greater energy independence, resilience, and sustainability. But these systems, which can operate independently or in conjunction with the main grid, require substantial upfront.

Microgrid Financial System

Microgrid Feasibility Tools

Below is a table of publicly available microgrid design and economic feasibility tools, in alphabetical order, that were identified with input from SEPA's Microgrid Working Group. Following the table, ...
