

# Microgrid multi-battery solar energy storage cabinet system soc control

## Overview

---

This paper proposes multi-agent coordination control strategies for battery energy storage system (BESS) in microgrids, focusing on SoC equalization and communication overhead reduction. Aiming at the problem of power distribution of multiple storage units during grid-connected operation of energy storage systems, the relationship between the PCS transmission power and the health state of the storage system, battery temperature, battery ohmic internal resistance and grid-connected. To address these issues, microgrids equipped with battery energy storage systems (BESS) have emerged as a viable solution. It also encourages the use of renewable energies to benefit from available sources.
