

# Moroccan island solar power generation inverter

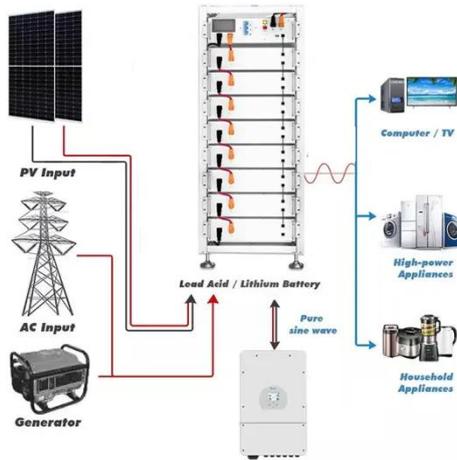

## Overview

---

Morocco has emerged as a solar energy hotspot, with its ambitious plan to generate 52% of electricity from renewables by 2030. At the heart of this transition lies photovoltaic (PV) energy storage systems, where 80kW inverters play a pivotal role. The primary aim of the plan was to generate 2,000 MW (or 2 GW) of solar power by the year 2020 by building mega-scale solar power projects at five locations — Laayoune (Sahara), Boujdour (Western Sahara), Tafaya (south of Agadir), Ain Beni Mathar (center) and Ouarzazate — with modern solar thermal. Solar power in Morocco is enabled by the country having very high rates of solar insolation — about 3,000 hours per year of sunshine, which rises to 3,600 hours in the desert. These inverters act as the "brain" of solar. Spanish firm Ingeteam SA announced today it has started the delivery of solar inverters to three photovoltaic (PV) power projects in Morocco, with a combined capacity of 170 MW. This latest work of SolarPower Europe's Global Markets Workstream explores the numerous investment.

### Solar power in Morocco

Solar power in Morocco is enabled by the country having one of the highest rates of solar insolation among other countries-- about 3,000 hours per year of sunshine but up to 3,600 hours in the desert. Morocco has launched one of the world's largest solar energy projects costing an estimated \$9 billion. The aim of the project was to create 2,000 megawatts of solar generation capacity by 2020. The Moroccan Agency for S...
