

Multiple brackets for one photovoltaic panel

Overview

Others follow a one-panel-per-rail approach that may require more brackets overall. For portrait orientation, panels are usually mounted with two rails, with one bracket at each rail end (total). Mounting brackets serve as the physical interface between the solar panels and the structure supporting them—whether that's a rooftop, ground system, carport, or façade. They bear the mechanical loads, absorb vibrations, and ensure proper orientation. Poor bracket configuration can lead to uneven. When it comes to maximizing your solar panel efficiency in 2025, choosing the right mounting brackets is essential.
