

Necessary conditions for installing solar panels in Benin

Overview

This paper summarizes the current RE situation in Benin and examines its future prospects. The government of Benin is focusing on building solar power plants as part of a policy to make renewable energy the main source of the country's energy supply by 2030. When it met in July, the Council of Ministers approved an updated National Renewable Energy Development Policy (PONADER) for. The 2020 Electricity Code in Benin has transformed the solar sector through key points: Market Liberalization has allowed private investors to participate in electricity production, transmission, and distribution, attracting more investments in solar energy. This policy means a massive, mandated shift for the energy sector, requiring the construction of solar power plants to reduce. The project is the result of cooperation between the French Development Agency (AFD), the European Union and the Beninese government to invest almost 16 billion West African Francs (\$25. 58 million) into building the solar plant.
